

NAVIGATOR STACK SERIES

An elegant, low-density stacking chair with outstanding “flex” comfort

- Back flex operates via a torsion-bar mechanism that allows 12° of recline with gradually increasing resistance
- Contoured back and waterfall seat edge contribute to a comfortable seating experience
- Seat and back have gently curving lines for an elegant look and feel
- Available in durable polypropylene and upholstered versions to suit any décor
- Choose sled base (armless model stacks 6 high on floor or 5 high on dolly) or 4-leg base (armless and arm models stack 5 high on floor or dolly); both are available powder coat painted or chrome plated
- Optional poly loop arms are cleverly designed to not interfere with the back flex of the chairs
- Various types of glides available for any type of flooring
- Laminate tablet arms available in two sizes
- Full Navigator line includes task, stool, stacking and nesting chairs
