

Instructions For Height Adjustment Of Metal Furniture Tables

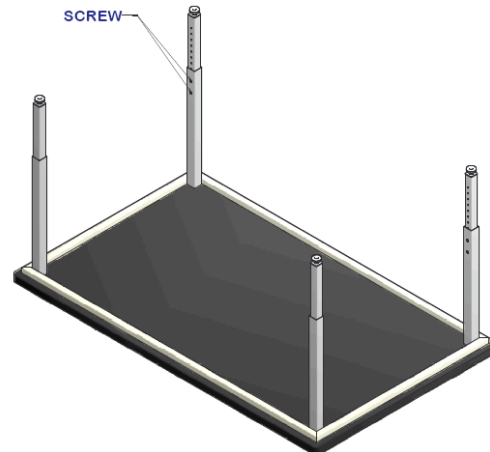

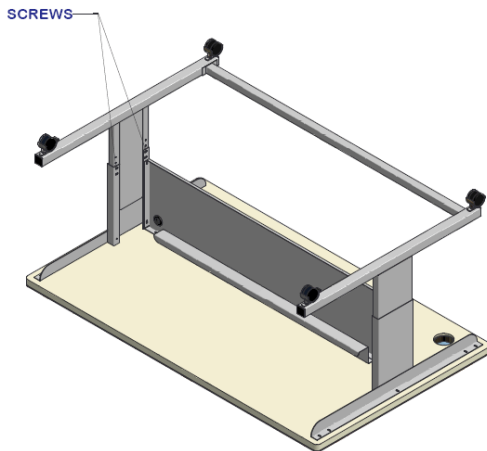

Includes: School Desks, Computer Tables & Modular Leg Tables

Standard screws included with tables are .25-28 x .5" self tapping

Tools Required:

- Cordless drill with bit driver
- #2 Phillips bit

After clearing desktop, place desk or table on its back or turn upside down if possible. Unscrew leg and adjust to desired height. Make sure not to over tighten screw, as this may cause the threads to strip. For a new hole, apply needed pressure to create new threads with the self-tapping screw.

If you have any questions or need assistance, please contact the IPI Anamosa plant at 800-332-7922 or your sales representative.
